An Overview Of Hearing Loss

Causes of hearing loss include: Damage to the inner ear. Aging and exposure to loud noise may cause wear and tear on the hairs or nerve cells in the cochlea that send sound signals to the brain. When these hairs or nerve cells are damaged or missing, electrical signals aren't transmitted as efficiently, and hearing loss occurs.

Hearing loss - Symptoms and causes - Mayo Clinic

Most hearing loss is sensorineural hearing loss and involves either the loss of inner ear hair cells or fibers of the auditory nerve. Other parts of our hearing mechanism also can be affected but this is not commonly the cause of age- or noise-related hearing loss.
